

NATHAN HARRIS

128 Nottingham Rd, Pittsburgh PA, 15205 | 301-204-2526 | nathan@nrhworks.com

Summary

I am a Drupal Developer with experience in custom module development, theming, and site building on Drupal 6, 7 & 8 projects. I am looking for a position as a contractor or full-time employee, and am open to various roles whether it be working alone, leading a project, or working as a member of a team.

Drupal Development

Custom Module Development: I have developed countless custom modules for Drupal 6, 7 & 8 sites, working with nearly every Drupal 7 API and a number of the Drupal 8 APIs.

Theming: I am familiar with the theme layers in Drupal 6, 7 & 8. My preferred set of tech for theming includes SASS/Compass, Bootstrap, jQuery, and templates written from scratch.

Site Building: I have worked with most of the commonly used Drupal 6, 7 & 8 contributed modules, and am comfortable finding, evaluating, and extending new modules when needed.

Optimization: I have worked with Mem Cache, Varnish, Boost, & Redis caching, and have spent much time optimizing Drupal sites for both frontend and backend performance.

Dev Ops: I am comfortable building and administering a LAMP or LEMP server, with additional experience in managing sites hosted on Pantheon and Acquia's platforms.

LAMP Development

PHP: I have worked with PHP since the beginning of my career, including building OOP applications from scratch and working with frameworks like Zend, Laravel, and Symfony.

MySQL: I have been employed as a MySQL DBA, and am comfortable setting up replication, writing custom views and stored procedures, writing complex queries, and conducting general query optimization.

Linux: I am comfortable working from a Linux command line and doing basic systems administration.

Education

B.S. Computer Engineering, WVU – 2002

Experience

NRH Works

Owner & Lead Developer / 2010 - present

NRH Works is my own company, which I use for all of my freelance work. At most, I have had 8 developers working for me at the same time, but have presently scaled down to just a couple of developers to whom I send overflow work. Some of the more notable clients we have worked with include: Plus Factory, Ally Interactive, Convergence Tech, Lymphé Divas, Playon TV, Sntial Tech, Lytleworks and Belle & Wissell.

Freelance Software Development

Freelance Software Engineer / 2002 - present

Throughout my career I have worked as a freelance developer. A few of the more notable sites I have either built or worked on in this capacity include: playon.tv, ktdcreative.com, comicsfix.com, sais-jhu.edu, lymphé-divas.com, sproutonline.com, docs.xamarin.com, observer.com, yourtango.com, media-partners.com & wm3.org.

Investor Place Media

Senior Software Engineer / 2008 - 2010

I worked at Investor Place Media as a Software Engineer developing new sites and maintaining existing sites. Some of these sites were developed using a custom CMS written in Perl, while others were developed using Movable Type.

Democratic National Committee

Software Engineer & DBA / 2004 - 2008

I was hired as a DBA by the DNC during the 2004 presidential campaign. Eventually, I transitioned to a Software Engineering role, and during my time there I worked on the following projects:

Democrats.org: the online face of the DNC. The version of the site I worked on was a custom PHP-based application with nearly 10 million registered users and over a million donors.

Demzilla: accounting software for tracking donations and filing FEC reports. During my time working on this project, we processed nearly half a billion dollars in donations.

Data Mart: a MySQL database of all registered voters in the US and various associated data. When I worked on this project as a DBA, the database contained around 450 million records.

Custom applications: I developed a number of tools for the DNC Press Department, DNC Political Department, DNC Tech Department, and various State Party offices.

WVHTC Foundation

Software Engineer / 2001 - 2004

I worked as an intern at the WVHTC while attending WVU, and was then hired as a Software Engineer. There, my responsibilities involved working on ASP and ASP.NET web applications.
